

## Table to check the operation of prime lens with Kenko TELEPLUS DGX

### Caution !

- Please DO NOT mount the unlisted lenses to the Kenko TELEPLUS DGX.
- Kenko TELEPLUS DGX supports only Nikon, Canon, Sony and Tokina lens. If you use Kenko TELEPLUS with other lenses, it might cause camera body, lenses or Kenko TELEPLUS to malfunction.
- Because of the specification of camera body, the focal length of lens could be transformed into the approximate value.
- As indicating the EXIF data, it could be that the lens would be not accurately recorded.
- The Canon EFS lenses can't be used or mounted with all KENKO TELEPLUS.

UPDATE: 21.NOV., 2011

RM: MF operation is recommended because the focussing could be difficult depending on the combined focal length.

MF: AF operation can't be used. Please use MF operation.

**Note:**

\* Nikon DSLR D40,D40X,D60,D3000 and D3100 is not compatible with AF NIKKOR coupler lens for AF operation.

AF-S lens (Built-in Motor, SD-M) is needed for using AF operation.

- If needed, exposure compensation should be adjusted.

- It is NOT APPLICABLE to use the Kenko TELEPLUS DGX and SONY NEX adapter "LA-EA2" & "LA-EA1" together.
